A series of sulfonamide-based modified peptides was synthesized in order to study their effect on the activity of PfATP6 (Atp6) and PfENO (NEO). These molecules were synthesized through solid-phase methods using the Fmoc strategy. The compounds were characterized by IR, ¹H NMR and MS. A selective inhibition of the growth of malaria parasites was observed for compounds 4 and 5. The most active compound, 5, inhibits the growth of the parasite at a concentration of 1 μM and displays an IC₅₀ value of 0.31 μM. The information obtained in this study is useful for the future development of new drugs for the treatment of malaria. 2892ce491b
