DefenseZone2downloadnosurveynopassword . Q: How to add the selected value to a check box array The code below shows one option of a check box array. I am trying to achieve a check box array that displays the selected value from the box.
A: As written, your code would only add one row to your database. But, if you wanted to be able to add multiple records then you can do this: " checked> " checked> ... etc

You can then access these with a form like: `$(checked){ echo
"; echo "; echo "; } ?>` Edit: If you want to make sure that
only one row is selected at a time, then use a condition. For
example: `$(selected = "; foreach 2d92ce491b`
