PK R YP and a whole slew of  
assorted Hungarian folders. THE  
BEST SAFE TO EVALUATE  
THE EFFICIENCY OF  
INFLUENZA VACCINE IN  
THE UNITED STATES:  
Developing Guidelines for  
Evaluating Vaccine Efficacy and  
Public Health Impact. The first  
influenza vaccine was approved  
in the United States in 1940.  
Since then, there have been

---

major changes in the structure and administration of the influenza vaccine. Numerous programs have been implemented to assess public health impact of influenza vaccination programs, but these are limited to within-season vaccine effectiveness and have relied on administrative data. A national panel of influenza experts convened to evaluate the best strategy to evaluate the public health impact of

---

influenza vaccine and to evaluate its effectiveness in the United States. Responses were developed by assigning an importance score to 4 domains of evaluation (within-season effectiveness, adjusted indirect effectiveness, adjusted indirect effects, and modeling) and by developing guidance for an evaluation including identifying objectives, best methodologies, and reporting. Influenza vaccine effectiveness in the United

---

States is low and recommendations should include a formal assessment of the benefits of vaccination program as well as a policy statement on the importance of influenza vaccination for individuals, institutions, and the public health of the United States and its territories. The ancient Greek mathematician Theon of Smyrna was born in Iambla, modern-day Syria, in the third century BC. He travelled widely, and he

---

eventually settled in the Egyptian city of Alexandria. His brother was the Neoplatonic philosopher and mathematician, Syrianus. He made significant contributions to mathematics. For example, he is credited for being the first mathematician to interpret the Pythagorean theorem, and to have developed a number of sophisticated proofs. He was also the first to make important contributions to trigonometry. He did this by

---

correctly identifying the number of right angles that can be drawn with a fixed, given perimeter.

This was one of the last great Pythagorean truths to be discovered, which was done by Pappus in 300 AD. There is a plinth commemorating Theon at Museum of Mathematics in the London Science Museum.

Theon died in Alexandria in 225 AD. He was aged around 65.

Theon of Smyrna Theon of Smyrna (c. 160 - 225) Theon of
