The incident took place on Oct. 2, 2012 on a Toronto-bound subway train at around 1:30 p.m., when the 67-year-old man tried to enter a vacant seat reserved for people with disabilities, said Tara Ligertwood, spokesperson for the TTC transit service. The woman did not agree to move. The man then struck the woman, causing her to hit her head, before getting off the train at the next stop, Ligertwood said. The incident was captured on the TTC's surveillance cameras, she added. Ligertwood said the court in Toronto convicted the

man of assaulting a person in a situation of vulnerable or distressed person. The case was prosecuted by the Ontario Special Victims Unit.

Q: What happens to an inactive account? What is done with an account that is inactive? Does it get deleted or does it become frozen and then become deleted? What about the profile that is associated with it? Are they deleted too?

A: When a person completes an initial registration but does not log in for six months, the account is no longer active, and the member is no longer connected to the network. The following profile information is not deleted: Display Name Real Name Age Member Type (Contributor, Administrator, Moderator, or User) Birthdate Avatar History Activity No profiles, tags, badges, voting, etc. are carried over to the account after it has been inactive for six months. When an account reaches 6 months of inactivity, the following

profile information is deleted: Display Name Real Name Bio History The network generates a new Display Name, but it's provided in a way to attempt to preserve any preexisting profile information, such as Avatars, Bio, History, etc. When the account is deleted, it will return all the information, images, and links that were stored on the network. If the account is deleted for any other reason, the information is deleted
