What's New In?

Vistumbler Portable version 1.7 offers several new enhancements in terms of efficiency and user-friendliness, including a better filter option, a WiFi history report and the option to upload custom database. The main improvement consists of a better filtering option, which includes the possibility to choose which types of information you want to view in the list of results. The list is available in 3 tabs, based on the signal strength, the network type (Wi-Fi, Bluetooth, WWAN, etc.), and the network name. If the signal strength is good, a "-" is displayed, with the label "Not detected". At the top of the screen, you can see the number of connections already detected and the date of the last scan. After selecting the number of results that you want to view, you can go to the next tab, where you can select the option to view details about the network type, including the signal strength, the channel used, the MAC address, the BSSID, the encryption method used, the SSID, and the credentials used. If you select the WiFi history report option, you will get a list of scanned Wi-Fi networks and their signal strength. This is useful to find out which networks are less prone to interference. You can also set up a bookmark of your preferred networks, so that you can find them easily. Additionally, the software now supports the export of the recorded data into different formats, such as VS1, VSZ, CSV, KML, GPX and NS1.
