While the drawing file format is well documented, there are fewer information on editing the design, in particular how to alter the network topology or optimize the drawing for performance. AutoCAD Web Content Server (AWCS) is a web application framework that can be used for extending AutoCAD. A minimum database for AutoCAD is a DWG file. Internet Protocol (IP) networking Autodesk IP networking is based on the open TCP/IP protocol and a number of vendor-specific protocols. Client and server A client is a computer program running on a machine that connects to the AutoCAD server, typically over a network. The AutoCAD client is configured to connect to the AutoCAD server on a particular port, usually port 3200. A server is a computer program that acts as an intermediary between one or more clients and the network. The AutoCAD server responds to client requests from the AutoCAD client. The AutoCAD server hosts one or more Autodesk servers. Autodesk servers host client plug-ins, but this is an optional configuration. Protocols AutoCAD supports a number of vendor-specific protocols for messaging between clients and the AutoCAD

server. Notifications (autocadnotify) The Autocad notify system is a client/server based system for creating and sending alerts to application users. Notifications can be sent as email or instant message. A notification is a message which is displayed on the screen of the user who receives the notification. The message can have information about the problem which caused the notification to be sent, and the notification can be configured to be sent automatically or only be sent when a user wishes to be informed about a problem. Tool bars Autodesk has a system for integrating graphical toolbars, now commonly referred to as "toolbars". The toolbars are similar in concept to those found in applications such as Word or Excel. They are movable and the user can have more than one toolbar present. Toolbars are created using a text editor and put into the AutoCAD application database. Actions In AutoCAD 2010, the term "actions" has been replaced by "dialogs" and "workflows". A dialog is a type of block which appears in the drawing window, and is used to request specific information from the user, to assist in editing a feature. For example, a dialog box

Deliver online or via email your AutoCAD drawings to the ones you're collaborating with and send all of their comments to you, directly in the drawing. You can also sync comments to your cloud-based drawing so you're always current with your design. (video: 1:36 min.) My Managers: Give feedback directly to managers and colleagues within a project who may need it to accelerate their ability to design. Managers can see all of the feedback in the drawing, even when a user is in the middle of working on a drawing. (video: 1:00 min.) Streamline Drawings: Implement new functionality or change existing drawing tools to improve efficiency for your users. Now the people who work with AutoCAD are able to communicate about any changes to the drawing in a simple, intuitive way. (video: 1:00 min.) "Check" Functionality: See the state of your drawings as you design, update, and close them. During closed sessions, the "Check" functionality allows you to check for possible errors in the drawing. (video: 2:03 min.) "Check" In Your Pocket: The new AutoCAD Mobile features on your smartphone or tablet make it easier than ever to collaborate with AutoCAD on the go. Check progress in real time, make comments, and update your drawings on the fly. No more having to worry about coming back to the office to update a drawing. (video: 1:00 min.) With AutoCAD 3D, you can draw in 3D, allowing you to create complex shapes, such as pipes and beams. You can have great flexibility with your 3D drawings with a smooth interface. (video: 1:00 min.) Improved Vector Graphics: The vector drawing engine is now 50 percent faster, so you'll experience smooth rendering. And your designs can now display more efficiently in web browsers and in applications like Adobe Photoshop. With the release of our Dragon Priest guide and Battle.net update on November 10th we will be launching a new series of guides covering all of the classes and roles in Heroes of the Storm. These guides are designed to help players understand how the roles and classes in Heroes of the Storm play, and will use our Dragon Priest guide as a baseline.
