- Author: Danil Popov - Copyright: LGPLv3+ - Homepage: - License: LGPLv3+ - Dependencies: - Needed to run the application: LXDE desktop, DBus Image viewer for LXP WIP: - Setup a repository from gitian (please help me with that if you know). - Make a deb package (please help me with that if you know). - Distribute the deb file. - Publish a repository from gitian (please help me with that if you know). - Remove the developer/deb-file from gitian. TODO: - Write new page (may need to use a translator) for package. - Add a minimum list of supported os. This is a large milestone. Next: - Make all pages live (i.e. useful) - Make the repository secure (no password, etc). Removal: - Remove the developer/deb-file from gitian. Description: The LXP image viewer is a simple image viewer written in python. It uses ImageMagick to display image formats. It displays images in a popup window, which allows you to compare images, see the properties of an image, and rotate, scale, and crop the images. LXP makes searching for images easy, and it can import images from the clipboard. Features: - A simple command-line interface - Image viewer - Image comparison - Thumbnails (rotate, crop, and zoom) - Filename tags - Filename and icon change notifications - Re-ordering of images - Import images from the clipboard - Works with LZMA2 archives - Supports XML image file formats Maintainer: Tomasz Stogola The application has been updated since the last milestone. The application is now using the latest version of F-Spot (0.9.7). There have been changes in the code base since the last release, and the new version of F-Spot required new changes to libf-spot. Bug fixes: - Clean up of temporary files during test. - Fix problem with LZMA files. - Fix problem with categories
