We have shown previously that endotoxin increased the production of nitric oxide, measured as nitrite, and that this effect was decreased by superoxide dismutase. In order to study the pathophysiological role of nitric oxide in endotoxic shock, rats were pretreated with 10 U/kg i.v. of superoxide dismutase. Animals pretreated with superoxide dismutase showed a reduced hypotension and an improved survival after administration of endotoxin. Nitric oxide and superoxide-generating enzymes were stimulated by endotoxin in control animals, but no increase of nitrite was observed in superoxide dismutase-pretreated animals. Inducible NOS mRNA was also induced, but the increase in cNOS mRNA was not significant after endotoxin administration. A comparable increase in NOS mRNA was seen in endotoxin-injected animals pretreated with superoxide dismutase, indicating that the increase in NOS mRNA is not directly involved in the hypotension.Q: Android: How to change a layout element's background color according to a class or variable value I created two layouts, one for text/static and one for password, the layouts are used by both Activities. 3da54e8ca3
