WiFi HotSpot

WiFi HotSpot is an easy to use freeware application that lets you share your existing broadband connection with up to 4 devices. WiFi HotSpot is the ideal way to share your broadband connection with your smartphone, tablet, laptop or PC without paying extra on top of your data plan. You can use WiFi HotSpot to connect up to 4 devices to the Internet on your PC or laptop without the need to install any router or modem. WiFi HotSpot works by using your Internet connection but it has no effect on your existing connection. This allows you to use WiFi HotSpot without the need to make any other changes to your broadband service. WiFi HotSpot can connect to your router using Wi-Fi or via Ethernet and it has a built-in router option which uses both your router and the Internet connection to share the connection. WiFi HotSpot has a simple intuitive interface where you can easily configure hotspot settings including: • Restricted Internet access • Hotspot name • Password • Number of devices connected • Type of Internet connection • Start at system startup • Notification to system tray WiFi HotSpot supports: • Windows XP/Vista/7/8 • Windows Server 2003/2008 Description: WiFi HotSpot is an easy to use freeware application that lets you share your existing broadband connection with up to 4 devices. What's New In WiFi HotSpot?

WiFi HotSpot is a useful application that aims to provide users a straightforward manner of allowing other peers to access their Internet connection. The program is able to do so by creating a wireless hotspot which can be protected with a password and started in a matter of seconds since no complex configurations are necessary. And it can also connect to a WAP or a standard router and act as an access point. Most of the changes are done automatically and all you have to do is start the program. Features: - Create a wireless hotspot. - Connect the hotspot to a standard router and act as an access point. - Connect to a WAP or the hotspot will act as a router. - The program is able to create an access point. - The hotspot is protected by a password. - A password can be set to protect the hotspot. - Host multiple connections simultaneously. - Set a minimum bandwidth. - Keep-alive of the connection. - Compatible with Windows 10. - Support for external hotspot interfaces. WiFi HotSpot is a useful application that aims to provide users a straightforward manner of allowing other peers to access their Internet connection.
