The use of computers to create and manipulate drawings has existed since the 1950s. At that time, the commercial application CAD was originally developed for the purpose of creating manufacturing drawings for the automobile industry. In the mid-1990s, CAD was applied to architectural design and drafting, adding functionality such as dimensioning, laying out, BIM (Building Information Modeling), and color rendering. The introduction of AutoCAD in 1982 paved the way for the automation of CAD. Read on to learn more about AutoCAD and its various functions, as well as AutoCAD tutorial videos to help you learn how to use AutoCAD on your own. Steps Autodesk's goal with AutoCAD is to create a user-friendly drawing tool that people who are not skilled in the use of CAD can still work with, yet at the same time, sophisticated users can use the software to its fullest capability. 1 Learn How to Use the Point, Line, and Arc Drawing Tool Open the tool bar from the AutoCAD menu. Click on the "Home" tab (top-left corner of AutoCAD). Click on "Drawing Tools," as

You can either click and drag on the canvas, or you can press the "mouse down" and click on a specific spot. If you click on the paper, a small circle will appear on the paper around the mouse pointer. Click and drag your mouse to draw the line. If you try to click on a spot that does not exist, the line will be dashed (broken). You can change the dash length or color by selecting the "drawing tools" tab. Click the arrow on the tool bar, then select "Line." After you have created the line, use the "Line" tool to make any modifications you need to the line's end points.
