Secure File Access - Multi-User User-friendly desktop encryption application
for Windows Secure File Access is a comprehensive and reliable software
solution created to serve your data protection needs, enabling you to encrypt
files and allow access only to certain users, based on a pre-approved USB drive.

Two-part protection The program is made up of two distinct components,
namely 'SFA Admin' and 'SFA Decryptor', the former dealing with permissions
and encryption tasks, while the latter is meant for end-users who will need to
open the documents. Both tools can be used without prior installation, on any
compatible system, just by launching the corresponding executable. In addition,
they leave no traces on the host system, when removed. Protect and unprotect
sensitive files using admin and user flash drives The 'SFA Admin' component
of Secure File Access allows you to determine the USB drives which will act as
admin and as users. However, bear in mind that this requires at least two flash
drives, as the USB configured as admin will not be able to also be set as user.

Afterward, you can begin encoding sensitive files by loading them into the
application and defining a save location. The next step consists of determining
which user USB drives can decrypt the documents, its hardware ID being a
distinguishing factor. You can even decide which trusted software can open
your files, before encrypting them. On the other side of the process sits the
'SFA Decryptor' tool, which can be used together with a previously-defined user
USB stick in order to open the documents encoded by Secure File Access. It

runs minimized in the notification area and displays no interface. A complex information protector In conclusion, Secure File Access is an efficient and handy utility that can assist you in safeguarding the data that you need to share with other people, limiting usage privileges to it based on a user USB flash drive. What's New in the?

A software made to protect sensitive files using two levels of protection. You can use both of the 2 tools without the need to install or modify a system component. You can also use admin and user USBs without modifying the system and leaving no traces on your system. Moreover, it can work with up to 4 sets of USBs. Each set of USBs can either be admin or user. Admin USB can decrypt and unprotect encrypted data. The program is made up of two main components: SFA Admin- This component allows for the creation of admin and user USBs. SFA Decryptor- This component lets the administrator decrypt and unprotect data which was encrypted by the program. It also provides a very handy file manager for transferring encrypted files between admin USB and user USB.

Venezuela's Vice President Nicolas Maduro gestures as he addresses the United Nations General Assembly in New York, U.S., September 27, 2016. REUTERS/Eduardo Munoz CARACAS (Reuters) - Venezuela will follow China's example in delaying its presidential election from Sunday to Feb. 14, President Nicolas Maduro said on Saturday, after a street protest movement erupted this week to press for early elections. "A period of reflection will come, it will not be long... we will extend the election to Feb. 14," Maduro said after meeting with the leaders of some of the government's powerful ally states. The extension follows an all-night session of the governing Constituent Assembly, which removed term limits from Maduro's presidency in a measure that drew widespread criticism. Opposition leaders and regional experts said the move was a return to dictatorship. Venezuela's political crisis is unfolding against the backdrop of an economic crisis brought on by years of socialist rule, severe recession and U.S. sanctions that have halted almost all oil exports. The country's opposition blames the government for the crisis. Maduro says the crisis is a plot by the United States and the opposition. Maduro last week claimed that George Soros, a prominent philanthropist and currency speculator who is known to back the opposition, had paid nearly a quarter of his top donors in recent months, showing that the U.S. financier was seeking to destabilize his government. Venezuela has detained around 300 people in the last week, and

opposition leader Leopoldo Lopez remains jailed, though he has not been
