DataStax Enterprise Streaming is a cost-effective and highly available, enterprise-class streaming solution that allows data to be processed in real time without requiring application modification. The feature set includes: Ad-hoc queries The ability to query live data while processing Range queries Streams, an element of all DataStax Enterprise servers, are the asynchronous, in-process computations that can perform streaming queries. They are also useful for querying historical data and data warehousing. Streams can work in two modes: One-time and on-going. One-time streams are initiated when the first row is read from the source and closed when no more rows are forthcoming. Because one-time streams work on one row at a time, they are well-suited for processing static datasets or small result sets. On-going streams allow stream processing to continue on multiple rows. They can be initiated when the initial row is read and also continue to receive rows as long as there are further rows. Thus, they are useful for processing live data or result sets that have a dynamic structure. The Streaming Service component of DataStax Enterprise has a RESTful API that allows users to create and run queries on streaming data in a low-latency environment. It includes a query language similar to SQL. Streams from DataStax Enterprise can be accessed from any application using its API. DataStax Enterprise includes a Streaming Service that executes streaming queries that are sent to DataStax Enterprise servers using an asynchronous API. The Streaming Service can be installed on any computer in the network. DataStax Enterprise Streaming uses a low-level query engine that can execute on any computer in a network. The BlackBerry Enterprise Server (BES) is the solution for the IT administrator responsible for maintaining the integrity of company data. The solution contains all the appropriate elements to ensure that data is protected, available, and secure. The BES provides server-based administrative tools to support the administration of BlackBerry Enterprise Server, BES Express, BlackBerry 10, BlackBerry Secure Configuration Manager, BlackBerry WebWorks (formerly known as BlackBerry Application Server), and BlackBerry Java Micro Edition (BJME) applications.
