Fidelizer is a tiny and portable piece of software that can improve the audio quality of your system. It is simple to use and does not apply permanent modifications to the PC. Since there is no setup pack available, you can drop the executable file anywhere on the hard drive and run it. Otherwise, it is possible to put Fidelizer on a USB flash drive or similar storage unit, in order to run it on other computers. What's more important is that Fidelizer does not work with the Windows Registry or leave files behind on the hard drive after removing it. The utility's interface is represented by a regular window with a well-organized layout. There aren't many configuration settings available, but the few ones are pretty powerful. Fidelizer offers three optimization modes, and each of them has its own ups and downs. The "Professional" mode improves the multimedia activity without significantly affecting the overall performance of your computer.

The "Audiophile" profile is specially designed to bring you a better audio quality, meaning that the memory allocated for system and network processes is significantly reduced, in order to assign a higher priority to audio players. The last optimization mode, "Extremist", comes with a few risk factors for the computer, as it shuts down all services to provide maximum resources to your audio experience. However, before resorting to one of these profiles, you may be interested in customizing the optimization mode when it comes to Fidelizer's core system and resource scheduler, processor core source assignment for multi-core optimizations, and advanced system or network process resource priority optimization. In addition, you can stop unneeded services and just leave the ones related to audio, as well as keep network features and user experiences. Applying all these settings is easily done, with the click of a button, but a system restart is in order. Fidelizer is light on the system resources and delivers good results in regard to the audio quality. We have not experienced any problems during our evaluation; the tool did not hang, crash or pop up error dialogs. Avid music fans are free to test Fidelizer for themselves, as long as they know what they are doing. Reviews: Best Audio Software/Tool for Windows There are no known defects. What is Fidelizer? Fidelizer is a program that needs to be installed on your computer. Once it is installed, you can start the application from its shortcut in the Start menu. Download Fidelizer - Final Release 1. The executable file below is a fully functional final release of the tool. It is a full standalone program that installs no components on your computer. Therefore, it works with all the latest Windows operating systems (7, 8, 8.1 and 10). 2. The software installer includes the executable file and a readme file with important information about it. The file can be run from the Windows desktop, or you can double-click the icon to start the installation. 3. The file has no setup, and no additional tools. It is not an OTA (over the air) update; it is a software package. The executable file has the extension.exe. What's the difference between an update and a package? The difference between the two software installation types is that an update is installed via Windows Update (if it's not on the file's properties) or by double-clicking the icon on the desktop, whereas a package is installed from a file. The following two screenshots compare the installation of the software between an update and a package: Why do I need an update? The reason for the existence of an update is that Windows 8/8.1/10 update windows have limitations. They do not allow programs to install programs without an activation key or use ActiveX controls, for example. That's why all of the programs on this page were not included in Windows Update. How to uninstall Fidelizer - Final Release If you have installed the program via the software installer (package), the uninstallation process is simple. You just have to delete the program's folder, and then you are done. If the uninstallation process was done by double-clicking the icon on the desktop, you will be able to find the folder path below the Start button. This is the location of the uninstallation folder: Uninstallation folder path: %USERPROFILE%\AppData\Local\Programs\Fidelizer If you installed the software via Windows Update, then it is a little more complicated. How to uninstall Fidelizer via Windows Update Launch the Windows Update window and search for the name of the application. In the "Installed
