My name is Dennis Powell, your, friend. I want to leave this message for all those millions out there who are a large part of The Living Library. On Twitter, you can log in and play tons of games and make friends, and to be quite frank, we aren't spending time making new friends, because it's kind of silly to sit around trying to make new friends when we have millions of old friends out there. There are some new Twitter trends, but really, why would you make new friends when you could just make new TV shows? I am an ordained minister, and we are open to the idea of God. I cannot work miracles, though. Or at least, I have not been able to perform miracles in a long while. My brain is not capable of that. All I can do is to ask for understanding, and I am getting that, but what I cannot get

is the understanding that everyone else has, and not just “every one else”, but you know, three billion other people. As a believer, I do not think it is possible to just plug in to another brain’s brain and expand how much I understand, because each brain is wired up differently, and we are all built differently. The idea that one person is wired up one way and another person wired up one way, and each person’s way is the only way that ever works, or is compatible with other ways, is just not true. I’ve been down this road before, long ago in college. I am in my 50s, and I take it as a given that you are at least a decade younger than me. While back in the day, I was in a Christian band, I did not understand other people’s ways of thinking. b7e8fdf5c8

In the United States, the average scrotum is 17.6 inches (43.3 cm) in diameter. Women are often mistaken as such a disproportionate sex due to the size of the breasts. In a male of average weight, the testes and spermatic cord can occupy up to 13.8 cubic inches (322.5 mL) of space. Such a large volume of fluid can cause pain and swelling within the scrotum. When the scrotal sac is distended to such an extent, it is referred to as a “testicular torsion,” and the testes may be severely damaged. A testicular torsion occurs when the blood flow in one of the testicular arteries is blocked, which causes an increased pressure in the testicular tissue. When this pressure continues, the tissue will start to die. There are two possible causes of a testicular torsion. A first cause of a testicular torsion is “acquired”—the twisting or coiling of a blood vessel that can occur after trauma to
